

# Allscripts MyWay™

## Simple, Complete, Affordable Solution for Smaller Medical Practices

Information technology is a powerful enabler for healthcare providers that can deliver advanced capabilities to boost clinical and business performance. But, the cost and complexity associated with deploying sophisticated solutions are critical barriers. High start-up costs, the ongoing expense and burden of managing an IT infrastructure, and the rigid complexity found in many software applications all represent roadblocks that limit adoption.

As a result, solo and small group practices often deny themselves the healthcare IT advantages and benefits enjoyed by their larger counterparts. Clearly, there needs to be a better way. Now there is: Allscripts MyWay.

In a word, Allscripts MyWay is different; and that difference is reinforced by three important attributes usually missing from healthcare IT applications: simple, complete, affordable.

**Simple:** Allscripts MyWay is intuitive, easy to learn, and even easier to use. Created to work the way you do, the software offers unique features like adaptive learning, customization on the fly, and a template-free workflow that match the way providers practice medicine.

**Complete:** Allscripts MyWay is a seamless integrated solution designed to enhance the clinical, business, and financial performance of smaller practices. In one comprehensive package, you'll find the key application features and functions necessary for Electronic Medical Records (EMR), Practice Management, and Claims Management.

**Affordable:** Allscripts MyWay is offered as an on-demand application. In simple terms, you outsource the IT burden associated with purchasing, operating, and maintaining expensive infrastructure equipment. Instead, you get the applications and capabilities you need through a predictable and manageable subscription service that matches your budget.

Allscripts MyWay ... a comprehensive combination that's "right sized" for smaller medical practices, giving you new power and a new way to practice medicine your way.

## Provides IT Advantages to Primary and Urgent Care

In many medical specialties, you need an extra measure of flexibility and adaptability to handle the variety of patient scenarios that make up a typical day. Allscripts MyWay is up to the challenge; in fact, it's optimized for a growing list of specialties that today includes: family medicine, internal medicine, pediatrics, and urgent care.

Within these environments, the integrated capabilities of Allscripts MyWay can make an amazing difference to the clinical, business, and financial performance of smaller practices.

## Industry Needs:

---

- Low start-up costs
- Easy process of managing an IT infrastructure
- Simple and complete software application

## Key Benefits:

---

- Provides IT advantages to primary and urgent care
- Offers Full-Featured EMR
- Streamlines Practice Management
- Accelerates Electronic Filings
- Delivers on premise or onDemand

## Key Features:

---

- Patient History
- Clinical Charting
- ePrescribing
- Lab Orders and Results
- Patient Follow-up
- Scheduling
- Patient Demographics
- Accounting

## Full-Featured EMR—Created Your Way

Raise your clinical productivity to new levels. With the innovative EMR capabilities of Allscripts MyWay, you can be more efficient and more effective at delivering quality care; and, you can focus on patients without worrying about the underlying technology.

Allscripts MyWay's unique capabilities match the way you like to work.

### PATIENT HISTORY

Patient information and clinical details are instantly available at any time. By having all the information in electronic form and in one place, you eliminate the search for missing files and chasing down paper charts.

### CLINICAL CHARTING

The adaptive learning and intelligent navigation features of Allscripts MyWay speed up the entire documentation process ... the more you use it, the more it learns your preferences and routines. You have complete control and flexibility to: build and save recurring findings and prescriptions as repeatable order sets; work with multiple symptoms or multiple patients at the same time; and access lab results, images, or notes. There are no templates to limit your options or productivity.

### EPRESCRIBING

Write, send, refill and track prescriptions simply and quickly. You can easily access medication histories, look up formularies, and check for interactions to safeguard patients.

### LAB ORDERS AND RESULTS

Create panels of commonly ordered tests, or order multiple tests with just a single click. Incoming results are easy to track, and notification messages with the results are automatically attached to patient records.

### PATIENT FOLLOW-UP

Automate routine communications and keep patients in the know by providing lab results, health maintenance reminders, or disease management recommendations that demonstrate support of Pay for Performance programs.

## Streamline Your Practice Management

Streamline your business operations and handle the difficult balancing act of practice management with ease. Allscripts MyWay gives you all the tools needed for:

### SCHEDULING

Make your day productive by allocating critical resources ... physicians, nurses, exam rooms, equipment, and time. With an intuitive interface, color-coding, overbooking protection, location tracking, and information access by everyone in the practice, you're in control.

## PATIENT DEMOGRAPHICS

Build thorough records that capture all the key details, and minimize data entry and errors. Demographic entries, insurance information, and pictures scanned from driver's licenses or insurance cards are automatically added as discrete data. And, as an integrated solution, Allscripts MyWay ties that comprehensive patient profile to the clinical and accounting sides of your business.

## ACCOUNTING

Manage every charge, transaction, referral, and change that affects the financial side of your practice. Posting charges and handling related billing tasks are almost immediate based on the clinical coding and services performed. You can save time by automating remittance postings, sending statements, and updating master files. Track each entry and account with accuracy and security; a complete audit trail is automatically built to safeguard your financial results.

## Accelerate Your Electronic Filings —Claims Management

Keeping a close watch on practice performance and profitability requires that you pay extra attention to the revenue that comes from insurance company claims. Processing claims and receiving prompt payments has never been easier. Allscripts MyWay uses Allscripts Payerpath capabilities to enhance the basic Practice Management claims functions so you can:

- Scrub charges and edit or correct filings in real time.
- Generate clean, accurate claims the first time.
- Accelerate cash flow performance.
- Monitor the status of each claim from submission through reimbursement.
- Improve performance with reports that identify trends and recurring errors that lead to claim rejections and denials.

## Deliver on Premise or onDemand, Your Way

Both on-demand and on-premise solutions offer application capabilities that contribute to medical practice success. But for smaller practices, the on-demand approach is an attractive alternative with notable advantages:

- Significantly lower capital expenses for infrastructure equipment
- No requirement for on site server storage space
- Eliminating unpredictable or recurring costs for maintenance, upgrades and emergencies
- No staff, salary or benefit costs for IT personnel

With a Allscripts MyWay on-demand solution, and Allscripts Healthcare as your application service provider, your technology and equipment concerns are reduced to much simpler levels — just internet access, your local area network, and familiar tablets and PCs for practitioners and staff. Allscripts takes care of all the server equipment and operational support.

In return, you get a high availability data center as your host, offering tight security and service reliability delivered by IT professionals. For a small medical practice like yours, technology just got simpler; and managing operating budgets is much easier with the predictable costs of a subscription service.

Now there's no reason smaller practices can't enjoy the same technology advantages as the largest enterprise operation.

One integrated approach delivering the features and functions necessary for EMR, practice management, and claims management. One unified database that makes sharing clinical and business information effortless for everyone in your practice. One solution that's simple, complete, and affordable: Allscripts MyWay.
