

Allscripts MyWay™

A Simple, Affordable and Complete Clinical Solution for Misys Tiger® and Misys PM™ Customers

Deliver on Premise or onDemand, Your Way

Information technology is a powerful enabler for healthcare providers that can deliver advanced capabilities to boost clinical and business performance. But, the cost and complexity associated with deploying sophisticated solutions are critical barriers. High start-up costs, the ongoing expense and burden of managing an IT infrastructure, and the rigid complexity found in many software applications all represent roadblocks that limit adoption.

As a result, solo and small group practices often deny themselves the healthcare IT advantages and benefits enjoyed by their larger counterparts. Clearly, there needs to be a better way. Now there is: Allscripts MyWay.

In a word, Allscripts MyWay is different; and that difference is reinforced by three important attributes usually missing from healthcare IT applications: simple, complete, affordable.

Simple: Allscripts MyWay is intuitive, easy to learn, and even easier to use. Created to work the way you do, the software offers unique features like adaptive learning, customization on the fly, and a template-free workflow that match the way providers practice medicine.

Complete: Allscripts MyWay is a complete clinical solution for physician offices and includes all the needed interfaces with Misys Tiger and Misys PM to manage the clinical, business, and financial performance of smaller practices.

Affordable: The low acquisition costs of Allscripts MyWay make it affordable for even the smallest practices. By choosing an on-premise solution, you would leverage your own IT infrastructure and in house capabilities. With Allscripts MyWay OnDemand you can let Allscripts take care of everything for a single affordable monthly payment. This option for electronic medical records will work seamlessly with your existing on-premise practice management solution, even while being hosted remotely.

Allscripts MyWay...a comprehensive combination that's "right sized" for smaller medical practices, giving you new power and a new way to practice medicine your way.

Industry Needs:

- Low start-up costs
- Easy process of managing an IT infrastructure
- Simple and complete software application
- Key Benefits:
 - Delivers on premise or onDemand
 - Provides IT advantages to primary care, medical and surgical specialties
- Offers Full-Featured EMR

Key Benefits:

- Delivers on premise or onDemand
- Provides IT advantages to primary care, medical and surgical specialties
- Offers Full-Featured EMR

Provides IT Advantages to Your Primary Care, Medical, and Surgical Specialties

Key Features:

- Patient history
- Clinical charting
- ePrescribing
- Lab orders and results
- Patient follow-up
- Adaptive learning
- Intelligent navigation
- Template-free charting
- Easy customization

In many medical specialties, you need an extra measure of flexibility and adaptability to handle the variety of patient scenarios that make up a typical day. Allscripts MyWay is up to the challenge; in fact, it's optimized for a growing list of specialties.

Full-Featured EMR: Created Your Way

Raise your clinical productivity to new levels. With the innovative EMR capabilities of MyWay, you can be more efficient and more effective at delivering quality care; and, you can focus on patients without worrying about the underlying technology.

Allscripts MyWay's unique capabilities match the way you like to work:

- **Patient History:** Patient information and clinical details are instantly available at any time. By having all the information in electronic form and in one place, you eliminate the search for missing files and chasing down paper charts.
- **Clinical Charting:** The adaptive learning and intelligent navigation features of MyWay speed up the entire documentation process...the more you use it, the more it learns your preferences and routines. You have complete control and flexibility to: build and save recurring findings and prescriptions as repeatable order sets; work with multiple symptoms or multiple patients at the same time; and access lab results, images, or notes. There are no templates to limit your options or productivity.
- **ePrescribing:** Write, send, refill and track prescriptions simply and quickly. You can easily access medication histories, look up formularies, and check for interactions to safeguard patients.
- **Lab Orders and Results:** Create panels of commonly ordered tests, or order multiple tests with just a single click. Incoming results are easy to track, and notification messages with the results are automatically attached to patient records.
- **Patient Follow-up:** Automate routine communications and keep patients in the know by providing lab results, health maintenance reminders, or disease management recommendations that demonstrate support of Pay for Performance programs.
- **Adaptive Learning:** The application learns and adapts to each user's patterns and preferences, making workflow and charting faster and easier.
- **Intelligent Navigation:** Automatically displays relevant clinical content based on presenting symptoms, even suggesting next logical entry options. Move freely anywhere without enter/exit screens.
- **Template-Free Charting:** Be flexible and match your preferred workflow. Go wherever you need to in the application to document multiple complaints or handle multiple patients easily.
- **Easy Customization:** Quickly change and customize screens to match your preferences, and allow each user in the practice to do the same.

Additional Benefits

- No interface costs from Allscripts MyWay to Misys Tiger or Misys PM
- Single vendor offers both applications
- Maximize current hardware investment with optimized configurations for Tiger/MyWay
- Minimize disruption to practice cashflow by keeping existing practice management solution and adding only the clinical solution
- View your schedule at the same time you view your patient's record

Developed to work with Misys Tiger and Misys PM: Exchange demographic, appointment, master file and charge data between your favorite Allscripts practice management system and Allscripts MyWay using industry standard HL7 interfaces that are included in the price (implementation service fees may apply). Connects your current server with either Allscripts MyWay OnPremise or Allscripts MyWay On Demand implementations. Single server deployments are available for Tiger on Windows customers: call for details. Requires Tiger v9.1.

Now there's no reason smaller practices can't enjoy the same technology advantages as the largest enterprise operation.

One solution that's simple, complete, and affordable: Allscripts MyWay.
